# Santolina chamaecyparissus

## (Lavender Cotton, Gray Santolina)

Santolina chamaecyparissus is a great drought tolerant plant for garden hot spots. It is an evergreen, aromatic subshrub with compact habit with an unusual cylindrical shape of the small, thick, silvery-white finely divided foliage. In July-August it is covered in small, bright yellow, pompon shaped flowers. Santolina looks denser and more uniform if the flowers are removed. It needs light for good garden performance, permeable soil but also grows well in dry, stony soil. It is often used for group planting or borders and is easily grown in pots and containers.
