Ficus microcarpa var. Green Island

(Dwarf Ficus)

The plant is delivered from F. microcarpa which is a large tree but this variety became a small slow growing shrub. It has a dense covering with a rounded format. The advantage of this species is that it does not have any aggressive root system like to other Ficuses. It has an oblong leathery leaf less than 5 cm. Take well shaded locations, can be planted under trees, but does best on partial or full sun. Green Island Ficus can grow on any soil type, once its established does not require too much water. Drought and high salt tolerant. The plant has a slow growth rate therefore needs only maintenance pruning.

Landscape Information

French Name: -

Pronounciation: FY-kus my-kro-KAR-puh

Plant Type: Shrub
Origin: Taiwan

Heat Zones: 9, 10, 11, 12 **Hardiness Zones:** 9, 10, 11

Uses: Hedge, Espalier, Indoor, Wildlife

Size/Shape

Growth Rate: Fast Tree Shape: Round

Canopy Symmetry: Symmetrical

Canopy Density: Dense Canopy Texture: Fine

Height at Maturity: 0.5 to 1 m Spread at Maturity: 0.5 to 1 meter

Ficus microcarpa var. Green Island

(Dwarf Ficus)

Leaf Image

Botanical Description

Foliage

Leaf Arrangement: Alternate

Leaf Venation: Pinnate

Leaf Persistance: Evergreen

Leaf Type: Simple

Leaf Blade: Less than 5
Leaf Shape: Ovate
Leaf Margins: Entire
Leaf Textures: Leathery
Leaf Scent: No Fragance

Color(growing season): Green Color(changing season): Green

Trunk

Trunk Susceptibility to Breakage: Generally

resists breakage

Number of Trunks: Multi-Trunked Trunk Esthetic Values: Not Showy

Fruit

Fruit Type: Berry

Fruit Showiness: False
Fruit Size Range: 0 - 1.5
Fruit Colors: Brown
Seasons: Year Round

Ficus microcarpa var. Green Island

(Dwarf Ficus)

Bark Image

Horticulture Management

Tolerance

Frost Tolerant: No
Heat Tolerant: Yes
Drought Tolerant: No
Salt Tolerance: Moderate

Requirements

Soil Requirements: Clay, Loam, Sand

Soil Ph Requirements: Acidic, Neutral, Alkaline

Water Requirements: Moderate

Light Requirements: Full, Part, Shade

Management

Invasive Potential: No

Pruning Requirement: Needed, to develop a

strong structure

Fruit/ Leaves/ Flowers litter: No

Surface Rooting: No Life Span: 25-50 years Edible Parts: None

Plant Propagations: Cutting
