# **Punica granatum**

## (Pomegranate)

Pomegranate is a long used by humans native from Iran and India. Its a small tree or large shrub. The leaves are deciduous if its grown in cold area. The plant basically is a sub-tropical plant but will take several hours of freezing temperature. The flowers are produced throughout the summer with a brilliant red color. The fruit is large, roundish, , red or purple in color. The seeds are coated in juicy, ruby-tinted sacs which is the edible part of the fruit. Pomegranates grow best in areas with cool winters and hot, dry summers. A few cultivars are adapted for growth in the tropics, but fruit production is poor unless the winter is unusually cool. For optimal fruit production the plant need regular fertilization.
