Castanospermum australe

(Lucky bean, Moreton Bay chestnut)

Lucky brown tree is a tropical, evergreen tree with an erect trunk, grey to brown smooth bark, and glossy dark green leaves. The flowers are pea-shaped, form in clusters, are yellow to orange in color and are an important source of nectar and pollen for bees. The wood is durable, hard, and heavy and is used as a material for construction. The seeds are edible but must be first sliced and washed in water for several days before cooking. The seeds cause severe gastrointestinal disturbance

Botanical Description

Foliage

Leaf Arrangement: Alternate Leaf Venation: Pinnate Leaf Persistance: Evergreen Leaf Type: Odd Pinnately compund Leaf Shape: Oblong Leaf Margins: Lobate Leaf Textures: Glossy Leaf Scent: Color(growing season): Green Color(changing season): Green

Flower

Flower Showiness: True Flower Type: Raceme Flower Color: Yellow, Orange Seasons: Summer, Fall

Trunk

Trunk Has Crownshaft: False Trunk Susceptibility to Breakage: Generally resists breakage Number of Trunks: Single Trunk Trunk Esthetic Values: Showy, Smooth, Colored Fruit

Fruit Type: Legume Fruit Showiness: True Fruit Size Range: Over 20 cm Fruit Colors: Brown

Castanospermum australe

(Lucky bean, Moreton Bay chestnut)

Horticulture Management

Requirements Soil Requirements: Clay, Loam, Sand Soil Ph Requirements: Acidic Water Requirements: Moderate

Light Requirements: Full, Part

Management

Edible Parts: Plant Propagations: Seed
