

Sabal palmetto

(Cabbage palm)

Cabbage palm can reach up to 20 m high. It has a rough, fibrous trunk that is quite variable in shape, from straight and erect. This palm is topped with a very dense, round crown of deeply cut, curved, palmate leaves. The flowers are creamy white very showy that become green to black fruits during summer. It is a very salt tolerant palm and tolerates any light and soil condition. It could be used as a specimen, or as a street tree since it is tolernat to urban conditions.
