

Wisteria sinensis

(Chinese Wisteria)

Chinese Wisteria is a shade-tolerant vine, but it blooms only when grown in the partial to full sun. It prefers a deep, rich loam, but will grow in any soil. Wisteria has a fast growth rate and may be hard to transplant due to a coarse root system. Planting from containers is easy. The roots are aggressive and could disrupt a nearby garden. The violet-blue flowers, borne in showy, drooping racemes, are produced in late winter (hardiness zone 8 and 9) to early summer (hardiness zone 6). They cover the plant for several weeks each year. Bark is beautifully twisted with age. Usually do not transplant well. All parts poisonous.
