## Wisteria sinensis

## (Chinese Wisteria)

Chinese Wisteria is a shade-tolerant vine, but it blooms only when grown in the partial to full sun It prefers a deep, rich loam, but will grow in any soil. Wisteria has a fast growth rate and may be hard to transplant due to a coarse root system. Planting from containers is easy. The roots are aggressive and could disrupt a nearby garden. The violet-blue flowers, borne in showy, drooping racemes, are produced in late winter (hardiness zone 8 and 9) to early summer (hardiness zone 6). They cover the plant for several weeks each year.Bark is beautifully twisted with age, Usually do not transplant well All parts poisonous
