Hamamelis mollis

(Chinese Witchhazel)

Chinese Witch-hazel is a little, moderate developing, deciduous tree fit for achieving 6 meters high and wide yet is all the more regularly observed at 3 to 5 meters. The three to six-creep long, dull, dark/green leaves will more often than not put on a garish show in fall, as the withering leaves change to shades of yellow and orange before dropping. The durable, flashy, yellow blossoms show up in early spring and are very fragrant. Be that as it may, they may infrequently be harmed by frosty temperatures. These sprouts are trailed by the generation of unnoticeable, green natural products which hold on the tree.
