

Chlorophytum comosum

(spider plant)

Spider plants are native to South Africa where they grow in light or dark shade. The linear leaves are green or variegated white and green. The flowers are white and grow on a loose panicle. The plants produce stolons and offsets. It is one of the most commonly used house plants as it can bear full shade conditions. In warm and hot regions it is used as ground cover. It can withstand limited drought but looks best in well-irrigated soil.
